11-11 Tech

Build what matters. Prove what works.

UNIVERSAL DIGITAL PLATFORM

Capability Standard

UDPCS 1.0

Marketplace • CMS • SaaS • Mobile • AI • Enterprise Application Readiness Framework

PURPOSE

A reusable due-diligence, design, build and operational-readiness standard for determining whether a digital product has the customer, administrative, corporate, technical, financial, security, legal and governance capabilities required to operate as a real company.

EDITION	**Client Reference Edition**
ISSUED	20 October 2026
PREPARED BY	**11-11 Tech**
POSITIONING	Tokyo-built. Africa-aware. Global by design.
USE	Architecture reviews • product planning • due diligence • build checklists • readiness audits

A capability framework from 11-11 Tech — product strategy, software engineering, IT operations, marketing technology and AI.

EXECUTIVE BRIEF

Build the company around the product - not after it.

A marketplace, CMS or application is incomplete when the public experience works but the business cannot govern, support, reconcile, secure, audit or extend it.

The recurring failure pattern in software projects is not usually the absence of another screen. It is the absence of an operating capability: a marketplace with no seller administration, a CMS with no editorial workflow, payments with no reconciliation, APIs with no developer console, or customer accounts with no privacy/deletion operations.

> **11-11 TECH DOCTRINE**
> Every external capability requires an internal control-plane counterpart. If customers can buy, sellers can sell, editors can publish, developers can integrate, or AI agents can act, the company must be able to authorize, inspect, support, audit, correct, suspend, recover and report on those actions.

How to use this standard

- Use the 35-domain Master Capability Catalogue as the architecture index for a new product or company.
- Mark each domain REQUIRED, CONDITIONAL, NOT APPLICABLE or FUTURE before implementation begins.
- For every material feature, run the Capability Mirror and the nine-dimension Feature Completeness test.
- Assess maturity at Foundation, Operational, Scalable or Enterprise / Regulated level rather than using a binary “built / not built” judgement.
- Require evidence. Source code, a design document or a green UI does not by itself prove operational capability.

Scope

UDPCS 1.0 is designed to be reused across marketplaces, content platforms, SaaS products, consumer/mobile applications, B2B platforms, AI-enabled software, internal systems and regulated digital services. The framework identifies capability areas; exact legal, tax and regulatory duties remain jurisdiction- and industry-specific.

OPERATING ARCHITECTURE

The Five-Plane Operating Model

The five planes prevent the customer application from being mistaken for the whole company.

Figure 1. The 11-11 Tech Five-Plane Operating Model.

Plane	Primary question	Typical surfaces
Experience	How do customers, sellers, partners and audiences receive value?	Web/mobile apps, seller portal, CMS studio, public site, partner portal.
Control	How does the company safely operate and correct the product?	Admin, support, finance, moderation, compliance and executive consoles.
Platform	How is capability shared and extended?	Identity, data, APIs, developer tooling, MCP/AI, events and integrations.
Operations	How is the service deployed, observed, secured and recovered?	Cloud, CI/CD, security operations, observability, incident and DR systems.
Governance	How is the company accountable?	Corporate, legal, privacy, regulatory, tax, risk and audit processes.

DESIGN RULE

The Capability Mirror

A feature should be mirrored across business, control, data, security, compliance and recovery before it is declared complete.

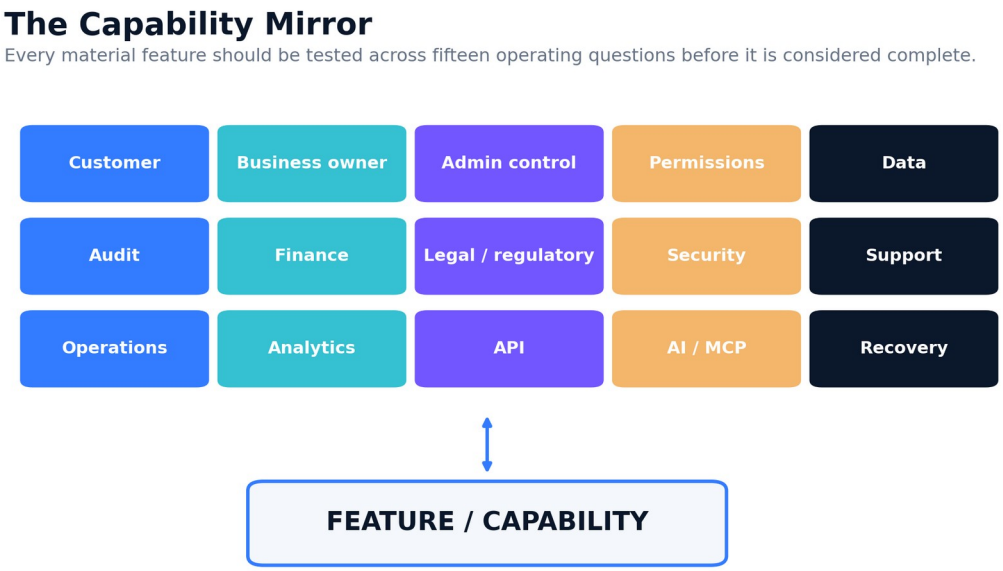

Figure 2. Fifteen questions that expose missing operational layers.

#	Lens	Required design question
01	Customer	Who uses it, what outcome do they expect and what happens at each state?
02	Business owner	Which person/team owns the outcome and policy?
03	Admin	Who can inspect, approve, correct, suspend, restore or override it?
04	Permission	What authority is required; what is explicitly forbidden?
05	Data	What authoritative records are created, changed or deleted?
06	Audit	Which actions must be traceable and immutable?
07	Finance	Does money, revenue, liability, commission, tax or reconciliation change?
08	Legal	Which policy, contract, legal or regulatory obligation is triggered?
09	Security	How can it be abused, escalated, forged or exfiltrated?
10	Support	What information and scoped actions does support need?
11	Operations	What failure states, retries, alerts and runbooks exist?
12	Analytics	How is success, quality and failure measured?
13	API	Does software-to-software access need parity or a deliberately smaller surface?
14	AI / MCP	Should an agent access it; what consent/approval is required?
15	Recovery	Can the state be rolled back, restored, reconciled or reconstructed?

MATURITY

Capability maturity is not binary

Different products need different levels of operational rigor. The correct target depends on money flow, data sensitivity, criticality, scale and regulation.

Figure 3. A four-level maturity model for planning and readiness reviews.

Level	Minimum interpretation	Typical gate
1 — Foundation	Core journeys work safely with identity, authoritative data, baseline admin and basic security.	MVP / private beta.
2 — Operational	Support, finance, monitoring, incident handling, audit and backup make daily operation sustainable.	Public launch / revenue operation.
3 — Scalable	Automation, developer interfaces, SLOs, data governance and delegated controls support growth.	Multi-team / partner / multi-region growth.
4 — Enterprise / Regulated	Advanced IAM, assurance evidence, DR, vendor governance and jurisdiction-specific controls withstand scrutiny.	Enterprise contracts / regulated deployment / high criticality.

MASTER INDEX

35-Domain Master Capability Catalogue

Use this as the mandatory architecture index before feature design, implementation or release planning.

ID	Plane	Capability domain	Purpose	Minimum evidence
STR-01	Experience	Strategy & Business Model	Defines who the product serves, why it exists, how value is created and how the business sustains itself.	Approved product brief; business model; roadmap; KPI definitions.
EXP-01	Experience	Customer Product	The public and authenticated experience across web, mobile and other channels.	Journey maps; release acceptance; production analytics; accessibility evidence.
IAM-01	Experience	Identity, Accounts & Organizations	Controls people, organizations, sessions and delegated access.	Role matrix; auth tests; session logs; tenant-isolation proof.
MKT-01	Experience	Marketplace / Supply & Demand	Connects buyers and sellers/providers and manages supply, demand and marketplace trust.	Seller lifecycle evidence; transaction reconciliation; moderation and dispute records.
COM-01	Experience	Commerce, Payments & Transactions	Manages quotes/orders/bookings/subscriptions and the complete money lifecycle.	Ledger/reconciliation; payment-provider evidence; refund/dispute controls.
CMS-01	Experience	CMS / Content / Media	Creates, governs, publishes and distributes structured content and digital assets.	Content workflow evidence; version history; publication logs; rights metadata.
DSC-01	Experience	Search, Discovery & Recommendations	Helps users find the right product, content, seller or service.	Search quality metrics; index health; relevance tests.
MSG-01	Experience	Communication & Notifications	Coordinates system, transactional and human communications.	Template catalogue; consent records; provider logs; bounce/failure handling.
A11Y-01	Experience	Accessibility & Internationalization	Makes the product usable across abilities, languages, locales and regions.	Accessibility audit; localization matrix; device/locale QA.
GRO-01	Experience	Sales, Marketing & Growth	Acquires, converts and retains customers while governing claims and consent.	Campaign attribution; CRM pipeline; consent evidence; experiment register.
PRT-01	Experience	Partners & Vendors	Provides structured onboarding and operation for strategic partners and third parties.	Partner register; contract status; integration health; vendor risk record.
CTL-01	Control	Admin / Operations Control Plane	Gives authorized staff safe operational control over the live product.	Admin role matrix; privileged-action logs; break-glass procedure.
CRM-01	Control	Customer Support / CRM	Enables support teams to understand users and resolve issues without broad administrative privilege.	Support runbooks; case history; SLA dashboard; scoped support permissions.
TRS-01	Control	Trust & Safety	Handles abuse, fraud, scams, illegal content/goods, policy violations and appeals.	Case file; enforcement log; appeal history; policy mapping.
FIN-01	Control	Finance & Accounting	Explains and reconciles why money moved and whose money it is.	Reconciliation; close pack; tax reports; chart of accounts / mappings.
COR-01	Control	Corporate Administration	Runs the company itself.	Corporate register; asset register; onboarding/offboarding records.

ID	Plane	Capability domain	Purpose	Minimum evidence
EXE-01	Control	Executive Governance	Provides leadership visibility and accountable decision-making.	Executive dashboard; risk register; decision log; operating review pack.
DAT-01	Platform	Data Platform & Governance	Manages data as an owned, classified, traceable and recoverable asset.	Data inventory; lineage map; classification; backup/restore evidence.
BI-01	Platform	Analytics & Business Intelligence	Defines trusted metrics and turns operational data into decisions.	Metric dictionary; dashboard ownership; data-quality controls.
API-01	Platform	API Platform	Provides governed software-to-software access.	OpenAPI definition; API tests; rate-limit logs; version/deprecation policy.
DEV-01	Platform	Developer Console & Portal	Turns APIs into a usable developer product.	Developer onboarding test; key rotation; SDK release evidence.
MCP-01	Platform	MCP / AI / Automation	Provides controlled agent access to tools, resources and workflows.	Tool inventory; policy matrix; agent action audit; revocation test.
INT-01	Platform	Integration & Event Platform	Connects internal and external systems reliably.	Integration register; delivery logs; retry/DLQ evidence; SLA.
SEC-01	Operations	Security & IAM	Protects identities, applications, infrastructure and operations.	Threat model; security tests; IAM review; vulnerability closure.
INF-01	Operations	Infrastructure & Cloud	Provides resilient compute, networking, storage and environment isolation.	Architecture diagram; IaC; capacity evidence; cost ownership.
ENG-01	Operations	Engineering / SDLC	Turns product changes into controlled releases.	CI evidence; release record; SBOM; rollback proof.
OBS-01	Operations	Observability / SRE	Makes service health measurable and actionable.	SLO dashboard; alert test; runbooks; incident trend.
INC-01	Operations	Incident Management	Provides a repeatable response when service or security fails.	Incident record; timeline; postmortem; corrective actions.
BCD-01	Operations	Business Continuity & Disaster Recovery	Ensures the organization can survive severe technical or operational disruption.	DR test; restore proof; continuity plan; dependency map.
REL-01	Operations	Release & Distribution	Controls deployment to app stores, web, enterprise or other channels.	Store approval evidence; signing custody; rollout log.
DOC-01	Operations	Documentation & Knowledge	Ensures every audience can operate, integrate with or support the product.	Documentation ownership; review dates; runbook tests.
PRV-01	Governance	Privacy	Governs personal-data collection, use, rights and retention.	RoPA/data map; request logs; retention evidence; privacy notices.
LEG-01	Governance	Legal & Regulatory	Maintains the contractual and policy foundation of the business.	Policy register; contract register; license evidence; review history.
GOV-01	Governance	Government / Tax / Reporting	Produces controlled evidence and reports for lawful obligations.	Submission records; legal-request log; evidence package; approvals.
RSK-01	Governance	Risk / Audit / Assurance	Creates confidence that controls are designed, owned and operating.	Control evidence; audit findings; remediation plan; exception register.

PLANE 01

Experience Plane

The product surfaces that acquire users, deliver value and create marketplace/content activity.

ID	Domain	Core capability set
STR-01	Strategy & Business Model	Problem definition; personas; value proposition; pricing/revenue model; competitive positioning; roadmap; KPIs.
EXP-01	Customer Product	Public website; app shell; onboarding; navigation; core journeys; account centre; self-service; transactional states.
IAM-01	Identity, Accounts & Organizations	Registration; authentication; MFA/passkeys; recovery; sessions; devices; tenants; teams; invitations; RBAC/ABAC.
MKT-01	Marketplace / Supply & Demand	Seller onboarding; KYB/KYC where applicable; listings; moderation; buyer journey; orders; pricing; payouts; disputes; reviews.
COM-01	Commerce, Payments & Transactions	Order states; payment authorization/capture; commissions; transfers; refunds; chargebacks; invoices; tax; settlement.
CMS-01	CMS / Content / Media	Content models; authoring; workflow; preview; scheduling; localization; versioning; DAM; delivery APIs.
DSC-01	Search, Discovery & Recommendations	Search; filters; sorting; taxonomy; ranking; autocomplete; recommendations; saved searches; zero-result handling.
MSG-01	Communication & Notifications	Email; SMS; push; in-app; inbox/chat; templates; preferences; delivery tracking; unsubscribe/suppression.
A11Y-01	Accessibility & Internationalization	WCAG controls; keyboard/screen reader; contrast; localization; currency; time zones; RTL; translation workflow.
GRO-01	Sales, Marketing & Growth	CRM; leads; campaigns; attribution; SEO/ASO; referral; lifecycle messaging; experiments; consent; suppression.
PRT-01	Partners & Vendors	Partner portal; contracts; credentials; integrations; referrals; commissions; vendor reviews; renewals.

DESIGN WARNING

Do not collapse “customer product” and “company operations” into one interface. A secure internal control plane should expose different information, permissions and actions from the public product.

MARKETPLACE BLUEPRINT

A marketplace is a transaction operating system

Listings + checkout are only a small part of a mature marketplace. The company must control seller lifecycle, transaction state, money movement, trust and post-transaction obligations.

Figure 4. Marketplace customer lifecycle with control and governance overlays.

ID	Capability	Required scope
MKT-01.1	Seller / provider acquisition	Registration, invitations, applications, business profile, onboarding state.
MKT-01.2	Seller verification	Identity, company/beneficial-owner, tax, bank/payment and document verification where applicable.
MKT-01.3	Seller administration	Approve/reject, suspend/reinstate, compliance state, account health, limitations.
MKT-01.4	Catalog / listings	Products/services, variants, price, availability, inventory, attributes, media, categories.
MKT-01.5	Marketplace moderation	Listing review, prohibited goods/services, counterfeit/illegal-content handling, duplicate/quality controls.
MKT-01.6	Buyer journey	Browse, search, detail, cart/request, checkout, confirmation and history.
MKT-01.7	Transaction engine	Orders, bookings, quotes, contracts, subscriptions and state transitions.

ID	Capability	Required scope
MKT-01.8	Pricing engine	Base price, dynamic pricing, promotions, coupons, commissions and platform fees.
MKT-01.9	Payment orchestration	Authorization, capture, settlement, payment methods, retries and currency handling.
MKT-01.10	Money movement	Split payments, transfers, seller balances, reserves, payouts and payout status.
MKT-01.11	Refunds & reversals	Full/partial refunds, cancellation, adjustments and transfer/payout reversal rules.
MKT-01.12	Disputes & chargebacks	Complaint intake, card disputes, evidence, liability and resolution.
MKT-01.13	Tax	VAT/GST/sales tax, tax codes, seller information, invoicing and marketplace-facilitator logic where applicable.
MKT-01.14	Fulfilment	Delivery, pickup, appointments, digital delivery, tracking and proof of service.
MKT-01.15	Post-transaction	Reviews, ratings, returns, warranties, claims, reorder/rebooking.
MKT-01.16	Marketplace trust	Seller/buyer risk, scams, fake reviews, fraud signals and account/linkage abuse.
MKT-01.17	Seller analytics	Sales, traffic, conversion, fees, payouts, disputes and account health.
MKT-01.18	Seller support	Tickets, appeals, payout/listing help, education and escalation.
MKT-01.19	Marketplace governance	Seller terms, buyer rules, prohibited goods/services, enforcement and appeals.

Marketplace Financial & Trust Controls

Payment processing is not the same as finance, and seller access is not the same as marketplace governance.

MONEY PRINCIPLE

The platform must distinguish company money, seller/provider money, customer refunds, processor balances, fees, taxes, reserves and liabilities. A successful payment response does not prove that the accounting state is correct.

Control area	Questions that must be answerable
Settlement & reconciliation	Can every provider transaction, transfer, fee, refund and payout be tied to an internal transaction and ledger state?
Seller balances	What is available, pending, reserved, disputed, withheld or already paid?
Disputes	Who owns card-network evidence, customer complaint handling, liability and account consequences?
Fraud / abuse	Can risk cases freeze or limit activity without corrupting transaction history?
Seller compliance	What information is required to sell in each jurisdiction/category, and how is expiry/reverification handled?
Tax	Which party calculates, collects, invoices, reports or remits tax in each supported market?
Support	Can support explain a payout or refund without receiving unrestricted finance/admin access?

CMS BLUEPRINT

A CMS is a content operating system

Professional content platforms separate authoring, governance, preview, publishing, delivery and audit rather than treating content as rows in a database.

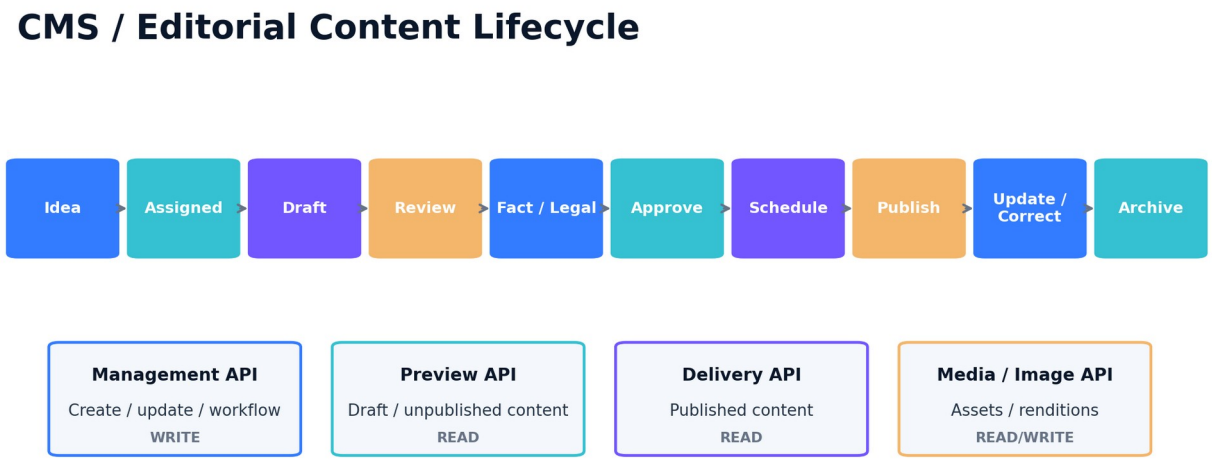

Figure 5. Editorial lifecycle and API separation for a mature CMS.

ID	Capability	Required scope
CMS-01.1	Content model	Types, schemas, fields, metadata, references, taxonomy, validation, SEO structure.
CMS-01.2	Creation / authoring	Structured editor, rich text, media, autosave, drafts, templates, reusable blocks, collaboration.
CMS-01.3	Editorial workflow	Idea → assigned → draft → review → fact/legal → approved → scheduled → published → corrected → archived.
CMS-01.4	Publishing	Immediate/scheduled publish, scheduled unpublish, embargo, preview, staging, channels, editions, rollback.
CMS-01.5	Versioning & audit	Revision history, compare/diff, restore, actor, approver, publisher, timestamps and correction history.
CMS-01.6	Localization	Locales, regional editions, translation workflow, fallbacks, localized assets/metadata and translation state.
CMS-01.7	Digital asset management	Photos, video, audio, PDFs, crops/renditions, captions, alt text, rights, licenses, credits, expiry.

ID	Capability	Required scope
CMS-01.8	Content APIs	Management API, Delivery API, Preview API, media/image APIs, GraphQL where useful, webhooks and indexing.

Professional editorial controls

- Explicit publication authority: writing, approving and publishing are separable permissions.
- Preview tokens and unpublished content must be isolated from public delivery credentials.
- Correction and update history should preserve accountability for material published changes.
- Media assets require ownership, usage-rights, credit, accessibility metadata and lifecycle controls, not only file upload.
- Localization needs translation state, locale fallback rules and region-specific publishing controls.

PLANE 02

Control Plane

The internal product used to operate the customer product.

ID	Domain	Control responsibility	Evidence
CTL-01	Admin / Operations Control Plane	User/seller/content/transaction administration; configuration; approvals; suspensions; refunds; flags; audit; feature controls.	Admin role matrix; privileged-action logs; break-glass procedure.
CRM-01	Customer Support / CRM	Tickets; interaction history; identity checks; SLA; assignment; internal notes; macros; escalation; knowledge base.	Support runbooks; case history; SLA dashboard; scoped support permissions.
TRS-01	Trust & Safety	Report queues; evidence; risk scoring; enforcement; suspension; takedown; appeals; reinstatement; regulator escalation.	Case file; enforcement log; appeal history; policy mapping.
FIN-01	Finance & Accounting	GL integration; AR/AP; invoicing; commissions; liabilities; settlement; reconciliation; tax; budgets; month-end; reporting.	Reconciliation; close pack; tax reports; chart of accounts / mappings.
COR-01	Corporate Administration	Entity records; directors; HR; onboarding/offboarding; procurement; contracts; devices; licenses; domains; approvals.	Corporate register; asset register; onboarding/offboarding records.
EXE-01	Executive Governance	Company health; revenue/cost; product health; reliability; security; compliance; risks; OKRs; roadmap; decision records.	Executive dashboard; risk register; decision log; operating review pack.

Operations Admin Console blueprint

Module	Minimum internal capabilities
Users & organizations	Search/inspect; verification; roles; memberships; suspension; restoration; deletion workflow; session/device visibility.
Marketplace	Sellers; listings; orders; refunds; disputes; commissions; balances; payouts; fraud flags; reviews; complaints.
CMS	Authors; editors; content; scheduled publication; media; categories/tags; editions; corrections; workflow queues.
Configuration	Feature flags; pricing/commission rules; categories; regions; templates; limits; policies; maintenance controls.
Security & access	Granular roles; step-up auth; approval thresholds; privileged action restrictions; break-glass; session termination.
Audit	Actor; authority; target object; before/after state; timestamp; source; reason; correlation/request IDs.

PRIVILEGE RULE

“is_admin = true” is not a mature authorization architecture. Support, moderation, finance, editorial, security and corporate teams should receive the narrow authority their work requires, with traceable elevation for exceptional actions.

PLANE 03

Platform Plane

Shared capabilities that make the business composable, integrable and agent-ready.

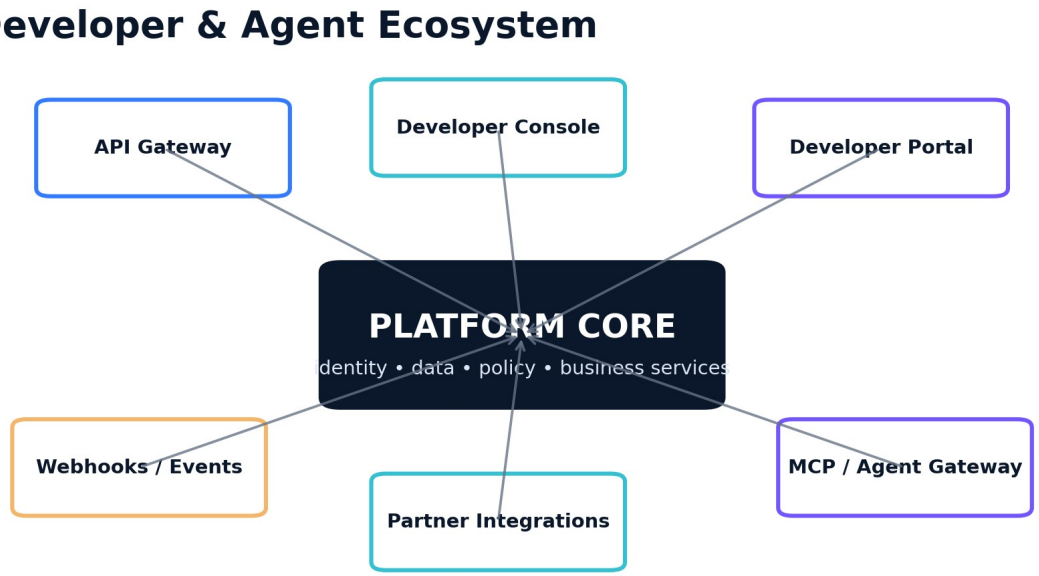

Figure 6. A mature developer platform separates API traffic, developer experience, partner integration and AI-agent access.

ID	Domain	Core capability set
DAT-01	Data Platform & Governance	Operational DBs; storage; cache; search indexes; warehouse/lake; catalog; lineage; quality; retention; deletion; backups.
BI-01	Analytics & Business Intelligence	Product, marketplace, content, commercial and technical metrics; cohorts; funnels; semantic definitions; dashboards.
API-01	API Platform	REST/GraphQL where justified; auth; scopes; quotas; rate limits; versioning; idempotency; pagination; errors; OpenAPI.
DEV-01	Developer Console & Portal	Developer accounts; apps/projects; keys; OAuth clients; scopes; sandbox; usage; logs; docs; SDKs; changelog; support.
MCP-01	MCP / AI / Automation	MCP server/gateway; tool/resource registry; OAuth; scopes; consent; human approval; audit; rate limits; secret isolation; versioning.

ID	Domain	Core capability set
INT-01	Integration & Event Platform	Webhooks; events; queues; connectors; OAuth integrations; imports/exports; retries; dead-letter handling; health; ownership.

API platform

- Authentication and authorization appropriate to user, service and partner identities.
- Scopes/permissions, quotas, rate limits, idempotency, pagination, consistent errors and request/correlation IDs.
- Explicit versioning and deprecation policy, with documented migration paths.
- Machine-readable OpenAPI descriptions for supported HTTP APIs, plus contract and compatibility testing.
- Webhook signing, replay protection, retries, dead-letter handling and observable delivery status.

Developer Console & Portal

- Developer identity, organizations, projects/apps, credential issuance and rotation.
- OAuth client registration, redirect-URI control, scopes, environments and sandbox/test credentials.
- Usage, quotas, request logs, billing where applicable, webhook configuration and secret rotation.
- Quick starts, SDKs, API reference, examples, changelog, migration guides, status and support.

MCP / AI Agent Gateway

- Tool, resource and prompt registries with explicit schemas and ownership.
- User/organization authorization, OAuth, fine-grained scopes and revocation.
- Human approval for consequential actions, with agent identity and complete execution audit.
- Secrets isolation, data-loss prevention, rate/usage limits, sandboxing and policy enforcement.
- Version compatibility, safe tool evolution, observability and emergency disconnect controls.

BOUNDARY

API access and AI-agent access are related but not identical. Agent actions require stronger contextual authorization, consent, approval and audit because an agent can chain capabilities in ways an ordinary integration may not.

Data, Analytics & Integration Control

The company should always know what data exists, why it exists, who owns it, who can access it, where it goes and when it must disappear.

Area	Minimum architecture
Operational data	Authoritative databases, transaction consistency, tenant boundaries and schema ownership.
Object/media storage	Ownership, encryption, lifecycle, malware/media validation where relevant and deletion semantics.
Search/indexes	Source-of-truth relationship, reindex/rebuild procedure, stale data handling and access filtering.
Queues/events	Delivery semantics, idempotency, retry, dead-letter processing and event versioning.
Analytics warehouse/lake	Data contracts, lineage, sensitive-data handling, semantic definitions and access tiers.
Backups/archive	Retention, encryption, immutability where needed, restore tests and deletion exceptions.
Data governance	Catalog, classification, quality, retention, residency, deletion, ownership and access review.
Integrations	Owner, credentials, scopes, health, logs, retries, versions, SLA and failure procedure for every dependency.

Metric families

Family	Examples
Product	Activation, DAU/MAU, retention, funnels, conversion, engagement, churn, feature adoption.
Marketplace	GMV, active supply/demand, liquidity, take rate, cancellations, refunds, disputes, seller retention.
CMS / media	Output, readership, engagement, conversion, author/channel/content performance.
Commercial	Revenue, margin, CAC, LTV, MRR/ARR where applicable, ARPU, cohort economics.
Technical	Availability, latency, error rate, throughput, crash rate, queue depth, cost and saturation.

PLANE 04

Operations Plane

The systems that keep software secure, observable, deployable and recoverable.

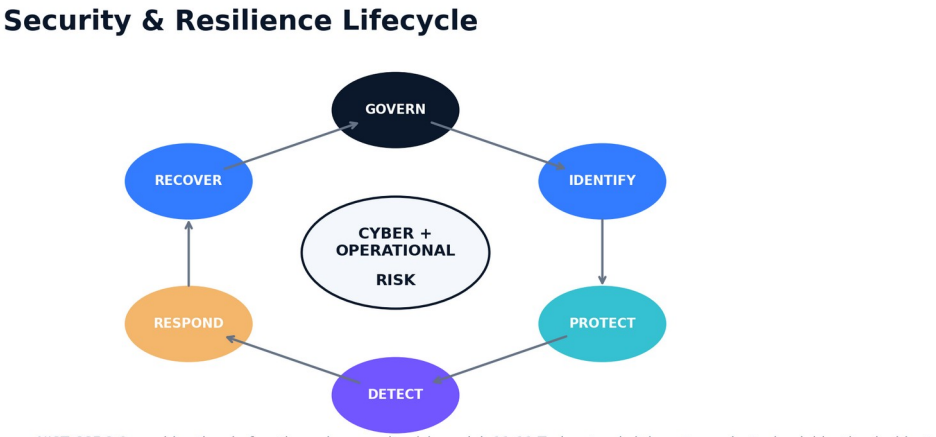

Figure 7. NIST CSF 2.0 security lifecycle used as an operational security anchor.

ID	Domain	Core capability set
SEC-01	Security & IAM	Threat modeling; MFA; privileged access; encryption; secure coding; vulnerability management; logging; incident security; secrets.
INF-01	Infrastructure & Cloud	DNS; certificates; CDN; WAF; compute; DB; storage; queues; caches; networks; scaling; regions; cost controls.
ENG-01	Engineering / SDLC	Source control; review; CI; tests; artifacts; dependencies; SBOM; environments; migrations; feature flags; deployment; rollback.
OBS-01	Observability / SRE	Logs; metrics; traces; RUM; crash reports; synthetics; alerts; dashboards; SLI/SLO; on-call; status page.
INC-01	Incident Management	Severity model; command roles; escalation; communication; containment; restoration; status updates; postmortems.
BCD-01	Business Continuity & Disaster Recovery	RPO/RTO; backups; restore testing; region/provider failure; emergency access; alternate communications; continuity runbooks.
REL-01	Release & Distribution	Signing keys; certificates; store metadata; review accounts; privacy declarations; phased rollout; beta; rollback; compliance.
DOC-01	Documentation & Knowledge	Help centre; seller academy; internal KB; engineering docs; developer docs; runbooks; security/compliance playbooks.

Engineering, Observability & Recovery Checklist

Shipping safely requires more than CI/CD.

Discipline	Minimum controls
Source & review	Protected repositories; branch/review policy; code ownership; signed/traceable changes where required.
CI & testing	Unit, integration, contract/API, DB, security, UI, accessibility, performance, resilience and end-to-end testing as risk requires.
Supply chain	Dependency policy, secret scanning, vulnerability scanning, artifact provenance and SBOM for appropriate environments.
Database change	Versioned migrations, forward/backward compatibility where needed, backup/rollback and production change control.
Release	Staging evidence, feature flags, phased rollout, rollback, release notes, approvals and change record.
Observability	Logs, metrics, traces, crash/RUM, synthetic monitoring, dashboards, alert routing and data retention.
Reliability	Defined SLI/SLO, error budget or equivalent service targets, capacity limits, load/performance tests.
Incident	Severity, commander, responders, communications, containment/restoration, timeline and postmortem.
Recovery	RPO/RTO, backup integrity, restore tests, provider/region failure plans, emergency access and continuity communications.

PLANE 05

Governance Plane

Legal, privacy, regulatory, tax, risk and assurance should be designed into the operating model, not added as a release-day checklist.

ID	Domain	Core capability set	Evidence
PRV-01	Privacy	Consent; purpose/legal basis; data inventory; DSAR; correction; deletion; portability; objection; retention; processors; breach workflow.	RoPA/data map; request logs; retention evidence; privacy notices.
LEG-01	Legal & Regulatory	Terms; privacy policy; seller/buyer rules; refund policy; API terms; content/IP process; licenses; contracts; regulated-field requirements.	Policy register; contract register; license evidence; review history.
GOV-01	Government / Tax / Reporting	Tax reports; seller reporting; regulatory submissions; legal holds; lawful requests; recalls; incident reports; sanctions/export controls where applicable.	Submission records; legal-request log; evidence package; approvals.
RSK-01	Risk / Audit / Assurance	Risk register; control library; internal audit; evidence retention; vendor assurance; exceptions; remediation; certification mapping.	Control evidence; audit findings; remediation plan; exception register.

Legal & policy set

- Terms of Service / customer agreement; Privacy Policy; seller/provider agreement and buyer rules where relevant.
- Acceptable-use and content policies; prohibited goods/services policy; refund/cancellation/subscription terms.
- Developer/API terms; partner agreements; IP/copyright/trademark processes; licenses and regulated-service documentation.
- Policy ownership, version history, effective dates, acceptance evidence and jurisdiction applicability.

Privacy control centre

- Data inventory and purpose/legal-basis mapping; consent and preference records where applicable.
- Data subject requests: access, correction, deletion, portability, restriction/objection as applicable to the jurisdiction.
- Retention schedules, deletion jobs, legal/anti-fraud retention exceptions and processor/subprocessor records.
- Breach triage, escalation, evidence and notification workflow.

Government / regulatory interface

- Tax, seller/platform or industry reports generated through controlled internal processes.
- Lawful request / subpoena workflow with legal review, scope control, data minimization and evidence of response.
- Legal holds, recalls, incident reports, sanctions/export controls or licensing records where applicable.
- Do not assume regulators require direct admin access. Prefer controlled evidence production unless a specific law or programme requires otherwise.

Corporate, Finance & Business Operations

A software platform is also an employer, contracting party, purchaser, asset owner and financial operator.

Corporate area	Capabilities to represent
Entity & governance	Legal entities; ownership; directors; registrations; delegated authorities; board/management decisions; insurance.
People / HR	Employees/contractors; onboarding; offboarding; training; confidentiality/IP; device and access assignment.
Procurement / vendors	Suppliers; contracts; renewals; spend; security/privacy assessment; licenses; subprocessors.
Corporate assets	Domains; trademarks; certificates; cloud accounts; API accounts; devices; software licenses; data assets.
Finance operations	AR/AP; invoices; credit notes; GL mappings; liabilities; settlement; reconciliation; tax; expenses; budgets; closing.
Commercial controls	Pricing; discounts; commissions; credit/refund authority; contract approvals; revenue reporting.

CORPORATE COMPLETENESS

Do not build internal HR, accounting or procurement software merely because the capability exists. The architecture may satisfy a capability through a governed integration with a specialist system. What matters is ownership, authority, data flow, evidence and failure handling.

SURFACE INVENTORY

24 surfaces a mature digital company may need

These are logical surfaces. Several may coexist inside one application, but the roles, permissions and data boundaries should remain explicit.

#	Surface	Primary audience	Purpose
01	Public website	Everyone	Brand, acquisition, public content/catalog, policy and support entry points.
02	Customer application	Customers	Primary product journeys.
03	Customer account centre	Customers	Profile, security, privacy, subscription, transaction and notification controls.
04	Seller/provider portal	Marketplace supply	Listings, orders, analytics, payouts, support and compliance.
05	Partner portal	Business partners	Contracts, integrations, referrals, commissions, support and documentation.
06	CMS/editorial studio	Authors/editors	Create, review, publish, localize and correct content.
07	Operations admin console	Internal operators	Cross-product operational control.
08	Support console	Support agents	Cases, customer context, scoped remediation and knowledge.
09	Trust & Safety console	Moderators/risk	Reports, fraud, policy cases, enforcement, appeals.
10	Finance console	Finance/accounting	Reconciliation, invoices, payouts, liabilities, close and reporting.
11	Compliance console	Legal/compliance	Policies, obligations, requests, evidence and regulatory reporting.
12	Corporate admin	Company operations	People, vendors, assets, contracts and approvals.
13	Executive dashboard	Leadership	Company, product, risk and reliability health.
14	Developer portal	Developers	Documentation, tutorials, SDKs, changelog and support.
15	Developer console	Integration owners	Apps, credentials, scopes, sandbox, usage and logs.
16	API gateway	Software integrations	Governed API access and traffic control.
17	MCP / Agent gateway	AI systems/agents	Governed tool/resource access and human approval.
18	Analytics / BI	Analysts/managers	Trusted dashboards, exploration and decision support.
19	Security / SOC console	Security teams	Detection, investigations, vulnerabilities and incident security.
20	Infrastructure / Ops console	Engineering/SRE	Deployments, service health, scaling and recovery.
21	Privacy centre	Customers/privacy team	Consent, data rights and preference controls.
22	Help centre	Customers/sellers	Self-service support and operational guidance.
23	Status page	Customers/developers	Service incidents and maintenance communications.
24	Regulatory/export interface	Authorized compliance staff	Controlled reports/evidence; not a general government admin login.

RELEASE GATE

The Nine-Dimension Feature Completeness Test

A UI working in staging is not enough to call a material capability complete.

Dimension	Pass condition
Product	The user-facing journey and expected outcomes work.
Admin	Authorized staff can inspect, approve, correct and control it.
Data	Authoritative data model, ownership, retention and integrity are defined.
Security	Authentication, authorization, abuse cases and secrets are controlled.
Audit	Material actions produce sufficient traceability.
Operations	Monitoring, alerts, runbooks, retries and failure modes are known.
Support	Agents can diagnose and resolve customer issues under scoped permissions.
Compliance	Privacy, legal, tax and regulatory impacts are identified and implemented where applicable.
Measurement	Success, failure, quality and business outcomes are observable.

Example — Seller payout

Dimension	What “complete” looks like
Product	Seller sees balance, payout state and destination.
Admin	Authorized finance/operator can inspect payout and permitted holds/adjustments.
Data	Ledger and provider references tie the payout to transactions and balance movements.
Security	Changing payout destination requires appropriate reauthentication/verification.
Audit	Material changes and payout actions identify actor, authority and before/after state.
Operations	Failures, retries and stuck states are visible and actionable.
Support	Support can explain status without unrestricted finance authority.
Compliance	Identity/tax/market obligations are enforced where required.
Measurement	Payout volume, failure rate, delay and reconciliation exceptions are monitored.

AUDIT WORKSHEET

Universal capability review checklist

Copy this table into project governance and complete it before declaring architecture or launch readiness.

ID	Capability	Applicability	Status	Accountable owner	Evidence / reference
STR-01	Strategy & Business Model	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
EXP-01	Customer Product	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
IAM-01	Identity, Accounts & Organizations	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
MKT-01	Marketplace / Supply & Demand	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
COM-01	Commerce, Payments & Transactions	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
CMS-01	CMS / Content / Media	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
DSC-01	Search, Discovery & Recommendations	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
MSG-01	Communication & Notifications	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
A11Y-01	Accessibility & Internationalization	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
GRO-01	Sales, Marketing & Growth	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
PRT-01	Partners & Vendors	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
CTL-01	Admin / Operations Control Plane	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
CRM-01	Customer Support / CRM	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
TRS-01	Trust & Safety	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
FIN-01	Finance & Accounting	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
COR-01	Corporate Administration	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
EXE-01	Executive Governance	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
DAT-01	Data Platform & Governance	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
BI-01	Analytics & Business Intelligence	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____

ID	Capability	Applicability	Status	Accountable owner	Evidence / reference
API-01	API Platform	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
DEV-01	Developer Console & Portal	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
MCP-01	MCP / AI / Automation	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
INT-01	Integration & Event Platform	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
SEC-01	Security & IAM	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
INF-01	Infrastructure & Cloud	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
ENG-01	Engineering / SDLC	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
OBS-01	Observability / SRE	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
INC-01	Incident Management	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
BCD-01	Business Continuity & Disaster Recovery	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
REL-01	Release & Distribution	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
DOC-01	Documentation & Knowledge	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
PRV-01	Privacy	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
LEG-01	Legal & Regulatory	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
GOV-01	Government / Tax / Reporting	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____
RSK-01	Risk / Audit / Assurance	☐ Required ☐ Conditional ☐ N/A ☐ Future	☐ Missing ☐ Designed ☐ Built ☐ Tested ☐ Live	_____	_____

Evidence Model

A capability is only as credible as the evidence proving it operates.

Evidence class	Examples	Weak substitute to avoid
Design evidence	Approved architecture, workflow, policy, role matrix, data model.	A verbal claim that “the backend handles it”.
Implementation evidence	Source, configuration, migrations, infrastructure-as-code, schemas.	A screenshot with no traceable implementation.
Verification evidence	Automated tests, security checks, contract tests, accessibility tests.	Tests weakened to make the build green.
Runtime evidence	Logs, metrics, transaction records, published content, real API response, real device behaviour.	Mock/demo data presented as production proof.
Operational evidence	Runbooks, incident exercises, restore tests, on-call evidence, support cases.	A document that has never been exercised.
Governance evidence	Approvals, audit events, policy acceptance, licenses, regulator/tax submissions where applicable.	Unowned policies or expired documentation.

PROOF PRINCIPLE

The higher the risk, the stronger the evidence. A payment, identity, privacy, security or regulatory capability should not be accepted solely because code exists.

Recommended Implementation Sequence

Build the minimum control and governance needed alongside the product - then deepen maturity as risk and scale increase.

Wave	Primary outcomes	Typical domains
Wave 0 — Authority & business design	Define product, business model, jurisdiction, data sensitivity, money flows, roles and non-negotiable obligations.	STR, LEG, PRV, FIN, SEC, IAM.
Wave 1 — Customer + minimum control plane	Build core journeys with authoritative identity/data and the admin ability to support/correct them.	EXP, IAM, CTL, DAT, MSG, domain-specific MKT/CMS/COM.
Wave 2 — Operational launch	Add support, monitoring, reconciliation, incident, backup/restore, distribution and documentation.	CRM, FIN, OBS, INC, BCD, REL, DOC.
Wave 3 — Scale & ecosystem	Add analytics governance, API/developer product, integrations, automation, partner operating model.	BI, API, DEV, INT, PRT, GRO.
Wave 4 — Enterprise / regulated	Harden assurance, advanced access, formal DR, vendor risk, regulatory evidence and agent governance.	RSK, GOV, COR, EXE, MCP plus advanced SEC/PRV/INF.

STANDARDS & REFERENCES

External standards informing UDPCS 1.0

UDPCS is an 11-11 Tech synthesis and is not an ISO, NIST, OWASP or regulator certification. The references below anchor specific capability areas in established external guidance.

Ref	Authority	Reference	Use in this standard
R1	NIST	Cybersecurity Framework (CSF) 2.0	Govern, Identify, Protect, Detect, Respond, Recover.
R2	OWASP	Application Security Verification Standard (ASVS) 5.0	Application-security verification requirements and rigor.
R3	W3C	Web Content Accessibility Guidelines (WCAG) 2.2	International web accessibility standard; Level AA is a common target.
R4	OpenAPI Initiative	OpenAPI Specification	Machine-readable, language-agnostic HTTP API description.
R5	Model Context Protocol	MCP Specification 2026-07-28	Stateless core, extensions, authorization hardening and agent capability model.
R6	AWS	Well-Architected Framework	Operational excellence, security, reliability, performance efficiency, cost optimization and sustainability.
R7	European Commission	General Data Protection Regulation - individual rights guidance	Access, rectification, erasure, restriction, portability and objection.
R8	European Commission	Digital Services Act	Marketplace transparency, seller traceability and platform responsibilities in the EU.
R9	Apple	App Review - Provide information for a complete review	Business model, test accounts, external services and regulated-field documentation.
R10	Google Play	User Data policy	Data safety and account-deletion expectations for applicable apps.
R11	Contentful	API basics	Example separation of Content Management, Delivery and Preview APIs in a mature CMS.
R12	Stripe	Connect documentation	Reference model for connected-account onboarding, money movement, payouts and marketplace operations.

ABOUT 11-11 TECH

Digital systems built as businesses, not isolated features.

11-11 Tech integrates strategy, marketing, product design, software engineering, IT operations and AI to create systems that can be used, governed, measured and grown.

MISSION
Turn difficult real-world problems into digital products people can trust, use and grow with.

How UDPCS 1.0 can be used in client work

Engagement	Deliverable
Architecture Discovery	Map the product and company against all 35 capability domains; identify missing planes and dependencies.
Marketplace / CMS Design	Define product, admin, finance, content, developer and compliance surfaces before implementation.
Technical Due Diligence	Assess whether claimed capabilities have implementation, runtime and operational evidence.
Launch Readiness	Apply maturity targets, feature-completeness gates and operational evidence before public release.
Modernization	Use the framework to identify where a technically functioning legacy product lacks control, platform or governance capability.
AI / MCP Enablement	Expose only capabilities that have appropriate identity, authorization, consent, audit and recovery controls.

Build what matters. Prove what works.

Tokyo-built. Africa-aware. Global by design.

© 2026 11-11 Tech. UDPCS 1.0 — Client Reference Edition.

This framework provides product, architecture and operational guidance. It does not replace jurisdiction-specific legal, tax, accounting, cybersecurity or regulatory advice.
